parking:	Gaisberglift Kirchberg in Tirol				
starting point:	Gaisberg Talstation				
destination point:	Gaisberg Bergstation				
best season:	JAN, FEB, MAR, DEC				

Altitude profile

Description

A challenging climb with a flat start followed by a route that gradually becomes steeper. The steepest section is in the middle of the climb and can be bypassed via the forest path if there is sufficient natural snow cover. In the upper third, the route flattens out again and follows a clearly marked path, staying at the edge of the piste until it reaches the top station of the Gaisberg lift.

The 10 rules of conduct for ski tourers

The following rules have been issued by the Alpine Safety Board. Ski slopes are primarily available to users of cable cars and lifts. To avoid accidents and conflicts, we ask you to observe the following in addition to the FIS rules of conduct:

1. Observe warning signs and local regulations.
2. Comply with the closure of a slope or part of a slope. The use of snow grooming equipment, especially with cable winches, or avalanche blasting, etc., can lead to life-threatening situations. For safety reasons, slopes may therefore be closed for the duration of the work.
3. Only ascend at the edge of the slope and in single file.
4. Only cross the slope in clear areas and at a sufficient distance from each other.
5. Only ski on freshly groomed slopes at the edge. Tracks that have frozen overnight can severely impair the quality of the slopes.
6. Leave the slopes at the specified time (depending on the location!).
7. Make yourself visible. In darkness or poor visibility, use a head torch, reflective clothing, etc.
8. Only use slopes that are specifically designated for slope tours.
9. Do not take dogs onto the slopes.
10. Use designated car parks and pay any parking fees.

equipment

When skiing off-piste, please always carry the recommended emergency equipment with you – the following items per person: 1. Avalanche transceiver (LVS device) – switched on and worn on the body under the top layer of clothing 2. Avalanche probe (in your rucksack) 3. Avalanche shovel (in your rucksack) Additionally recommended: mobile phone, orientation equipment, first aid kit, bivouac sack and possibly an airbag rucksack, additional thermal protection.
